WHOLESALE MARKET HAS BEEN DEFINING OUR LIFE!

“ *I’d rather to turn off my wind asset because the price is not making sense!* ”

“ *It is winter again and the news doesn’t look good! Is energy price going up again?* ”

WESSEX SCENARIO

- Imagine a small town in the Wessex community.
- The community has houses, multiple schools, local businesses, and renewable energy producers like a community solar farm and a few wind turbines, or where some businesses have their own solar generation.

BEFORE URBANCHAIN

- The schools and businesses are buying energy from a national supplier, facing fluctuating prices.
- Where there is locally generated renewable energy, it gets sold back to the grid at low rates, instead of benefiting the local community.

AFTER URBANCHAIN

- When **powered with UrbanChain**, the schools and businesses buy electricity directly from the local generators, or the schools and businesses that don't yet have their own generation, work with us to have solar installed on their own buildings - becoming prosumers.

OUR **VALUE PROPOSITION** TO COMMUNITIES

Affordable Green Energy

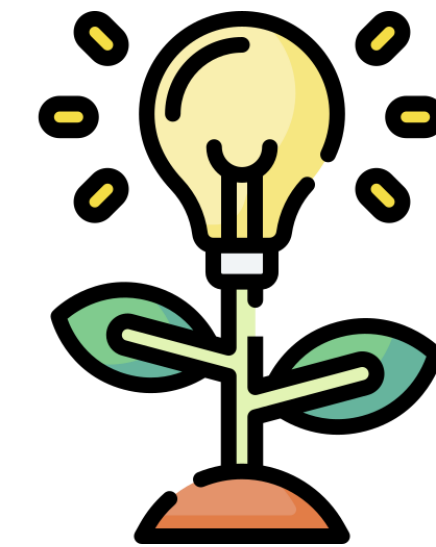

CAPPED AFFORDABLE PRICE

To providing certainty, our commodity price is capped. Proven savings for communities.

100% TRANSPARENCY

Community consumption is matched on granular basis with renewable generators.

CLEAN COMMUNITY ENERGY

The community benefits from clean, local and traceable energy.

THE FUTURE IS NOW THE FUTURE IS NOW THE FUTURE IS NOW THE FUTURE IS NOW
